Web UI + Flasher

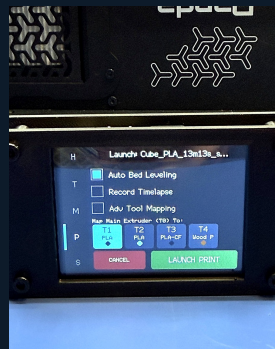

Browser control &
1-click install

Tool Status

Print Monitor

Smart Launch

Jog Controls

github.com/Nate-DUDV2/CYD_SnapMaker_U1

MIT License • Works with Snapmaker U1 and any Klipper + Moonraker printer

PHYSICAL SCREEN + LOCAL WEB INTERFACE

Direct Moonraker API

No middleware. Live temperatures, progress, tool control, and more over Wi-Fi.

Live Filament Syncing

Pulls types & colors from Klipper. Custom palette + HEX picker on the screen.

Advanced Print Launching

Toggle ABL, Timelapse, map T0 to any tool. Patches G-code on the fly (SD card).

On-Screen + Web Config

Edit IP, name, Wi-Fi, and calibrate touch from the device or the local webpage.

One-Click Web Flasher

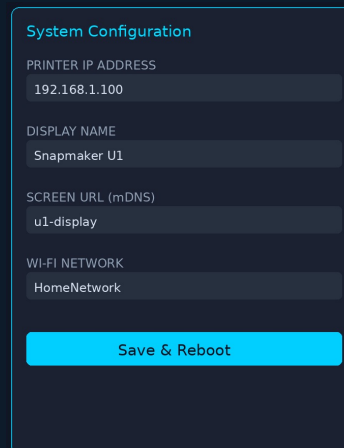

USB + Chrome/Edge → Install. No Arduino IDE or PlatformIO for normal users.

Local Web Dashboard

Phone, tablet, or PC → <http://u1-display.local> — full status, filaments, diagnostics, SD upload.

Web Dashboard / Filaments

System Configuration

Hardware Needed

- ESP32-2432S028R "Cheap Yellow Display" (Resistive Touch / XPT2046, 2.8")
- MicroSD card (FAT32) for advanced print launching & file patching
- Data-capable USB cable

Get Started in Minutes

1. Flash via the Web Flasher in Chrome or Edge
2. Connect to the temporary Wi-Fi setup network and join your home network
3. Set printer IP on the screen or at <http://u1-display.local> → Start controlling!

Web UI works on any phone, tablet, or PC on the same network — no extra apps needed.
